

SMART YACHT SOLUTIONS - USE CASE

Black Water Discharge Pump Control

Operate your black water discharge pump from the helm station or anywhere on board.

THE SOLUTION

Simplifies offshore discharge operations while cruising.

On many factory-installed systems, particularly on Lagoon 46 and Lagoon 50 models, the black water discharge pump is controlled from a panel located inside the bathroom. This requires a crew member to go below deck and operate the system manually at the appropriate time. With Smarter.Yachts, the discharge pump can be activated directly from the helm station - or anywhere on board - once the yacht is outside the 12 nautical mile zone. This allows the operator to remain in full control of the vessel while performing the discharge safely and efficiently.

Key benefits

- No need to access interior control panel
- Operate directly from the helm station
- Ideal for offshore discharge procedures
- Complements existing standard momentary switches

KEY POINT 1

No need to access interior control panel

KEY POINT 2

Operate directly from the helm station

KEY POINT 3

Ideal for offshore discharge procedures

YOUR YACHT. YOUR CONFIGURATION.

Discuss your installation with us.
